Project Description (attach additional pages if necessary)

This Project consists of the reconstruction of the zoo’s aquarium exhibit, foyer and central boiler plant. The aquarium is located on the ground floor of the main zoo building and the boiler plant is located beneath the aquarium in the double height cellar space. The reconstruction of the aquarium involves demolition of the existing exhibit followed by installation of new state-of-the-art tanks and life support systems. The project also includes installation of dedicated MEP/FP systems to support the aquarium exhibit space. The new HVAC units are to be located in the attic space 2 floors above the exhibit and new condensing units are to be installed on the flat roof above the adjacent Reptile Wing. This work is to be undertaken whilst the adjacent zoo wings remain open to the public and should be phased accordingly to maintain egress from the building. The reconstruction of the central boiler plant involves demolition of the existing boiler equipment serving the building and installation of new modular boiler units. The work is to be undertaken whilst the building is open to the public. A temporary boiler unit is to be installed at the exterior of the building to maintain full operational capacity for the animal wings the existing boiler serves.

M/WBE Participation Goals for Services

Enter the percentage amount for each group or for an unspecified goal. Please note that there are no goals for Asian Americans in Professional Services

Prime Contract Industry: Construction

Group	Percentage
Unspecified *	5 %
or	
Black American	Unspecified %
Hispanic American	Unspecified %
Asian American	Unspecified %
Women	Unspecified %
Total Participation Goals	5 %
